

Badger Meter Europa

## Verification Device

### Description

All important parameters of the flow meter are measured, protocolled and evaluated. The accuracy of the amplifier and of the in-/outputs as well as the functionality of the detector are measured without process interruption more easily, more precisely and better secured.

Company internal quality directives as well as governmental requirements, can be observed quickly and without the need for calibration on external test stands. Directly traceable on national and international standards. Uncertainty < 0,1%.

### Applications

The verification device enables to check the perfect and exact functionality of the electromagnetic flow meters types M2000 and M5000 on site in regular time intervals at a low cost and without interruption of the process. The device is verifying that the MAG meter's calibration is still ranging between  $\pm 1\%$  of the primary factory calibration.

### Features

- Complete verification on site of MAG meter plants without process interruption
- Cost and time saving: Demounting, transport, calibration and mounting are no longer necessary
- Quick and easy check, no additional equipment necessary on site (like printer, PC, mA meter, etc.)
- Evaluation via PC software (provided with the delivery package)
- Print-out of verification certificates

### Delivery package with carrying case
